While this feature may make it easier to the coating can also catch water and break or peel over time. Heat wires: This unique feature offers a handle, which is usually two-breasted with heat-conductive liquid inside. How your hand is in your hand the handle, the liquid warms up and facilitates the scoop of hard ice cream. Particular attention to such hand washing and avoiding harsh bumps or drops will keep these special handles in the tact. This is because dishwashers use high temperatures and detergents, which can be harsh. Therefore, it is best not to put aluminum scoops or those that have coated or heat-conductive handles in the dishwasher.
